Paecilomyces variotii
Penicillium aurantiogriseum
Penicillium brevicompactum
Penicillium chrysogenum
Penicillium citrinum
Penicillium corylophilum
Penicillium digitatum
Penicillium expansum
Penicillium italicum
Penicillium roqueforti
Penicillium viridicatum
Stachybotrys chartarum
Trichoderma harzianum
Trichoderma viride
And many more

EHC-D can assess an individual for mycotoxin and mold exposure by their medical and environmental history and laboratory analyses.

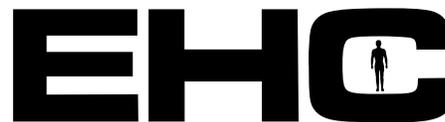

Laboratory analysis may include:

- Lymphocyte Subset Panel
- CBC
- ANA
- Mold Antibody Panel
- Mycotoxin Panel
- Skin testing of molds
- Skin testing of chemicals
- Skin testing of select foods
- Evaluation of venous/arterial blood gases
- Mold analyses of home and office environment

Treatment may include:

- Antioxidant IV Therapy
- Mold immunotherapy
- Rotary/Elimination Diet
- Deep Heat Chemical Depuration Program
- Oxygen Therapy Program,
- Environmental Controls in Home and Office

Mold and micotoxin exposure is toxic exposure. Treatment is directed at the individual, his/her immune system and chemical enzyme detoxification system and his environment. Successful management of the total person and his total environmental leads to optimal health.

Household Mold Sensitivity Treatment

Environmental Health Center – Dallas

Mold has existed since the dawn of time, but it's now a big issue on the home front.

The Environmental Health Center – Dallas offers a unique way to neutralize your household mold allergies. We literally capture the mold in your home using a simple kit, cultivate it, and then use it to create an antigen that neutralizes your mold sensitivities.

Stachybotrys

Symptoms Include:

- Sneezing
- Watery Eyes
- Headaches
- Itching skin
- Joint aches
- Muscle Pain
- Hives
- Depression
- Irritability
- Behavior Problems
- Throat Hoarsness

Homes are built to be more energy-efficient than they were 20 years ago because they are better sealed against outside elements. However, just as they seal the weather out, they seal in whatever moisture is generated inside – from water leaks, condensation from air conditioners or steam from the shower and stovetop.

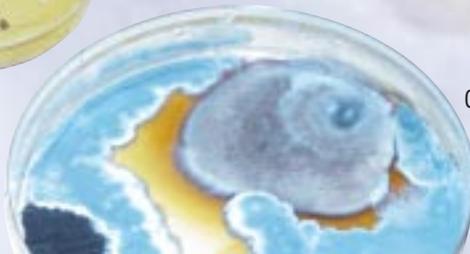

Mold is everywhere around us and you can't avoid being exposed. No matter how diligent you are at cleaning and vacuuming!

The problem with mold is some people develop sensitivities to molds through prolonged exposure. This occurs most commonly at home, where you spend the majority of your time relaxing and sleeping.

Mold spreads by producing reproductive cells called spores and sending them into the environment. Mold spores are too small to detect with the naked eye.

Aureobasidium

Cladosporium
